SKILLS / TECHNOLOGIES

- **Languages:** TypeScript, Python, JavaScript
 - **Frameworks & Libraries:** Next.js, ReactJS, Node.js, FastAPI, ExpressJS, GraphQL, NestJS, React Native
 - **Databases & Cloud:** PostgreSQL, MySQL, MongoDB, Cloudflare Workers, Cloudflare Pages, AWS, GCP
 - **Tools & Workflows:** Git, GitHub Workflows, Playwright, Docker
-

PROFESSIONAL EXPERIENCE

Product Engineer & Technical Judge

NativelyAI & Lablab.ai | Dover, DE, USA (Remote) | *Sept 2025 – Present*

- **Agentic Core Architecture:** Engineered autonomous state machines for task execution within [Builder](#), enabling LLM agents to auto-start, self-assign, and sequentially complete full-stack product features.
- **Agent Behavior & Guardrails:** Designed alignment protocols to eliminate non-deterministic UI rendering, minimized streaming latency over broken sockets, and implemented defensive rules to prevent prompt injection and jailbreaks.
- **Custom Design System:** Re-architected the layout engine for generated projects, transitioning user output from generic code templates to a scalable, standardized design token system.
- **Technical Evaluation & DevRel:** Served as an official Hackathon Judge and technical mentor for [Lablab.ai](#), facilitating developer relations and shipping critical hotfixes for beta platform users.
- **Ownership Acceleration:** Promoted from Engineering Intern to full-time Product Engineer within two months, recognized for high-velocity delivery of core system features and strong technical ownership.

Software Engineer

Punch Agency | Estero, FL, USA (Remote) | *Jan 2025 – Sept 2025*

- **Full-Stack Development:** Architected and engineered production-ready web and backend applications for global startups including Zwilt, Entrecore, and Elmer.
 - **Workflow Optimization:** Collaborated directly with designers and stakeholders to translate abstract product requirements into structured development workflows and clean, maintainable code.
 - **Scalability:** Built scalable components and optimized cross-functional data flows using Next.js, Node.js, and GraphQL, ensuring high performance across varied project requirements.
-

PROJECTS

- **[Holy Creed](#):** A cross-platform faith-tech ecosystem featuring automated daily creeds, built-in subscription infrastructure via RevenueCat, and high-fidelity component layouts optimized for user retention.
 - **[LeetBase](#):** A productivity Chrome extension that automates continuous synchronization between LeetCode submissions and GitHub repositories, natively embedding targeted video reference pipelines to minimize learning friction.
 - **[Tsfluent](#):** A lightweight, open-source functional programming library for TypeScript implementing the Result type to significantly improve backend error handling and compile-time type safety.
-

AWARDS & ACHIEVEMENTS

- **Winner (Top 5) Co-creating with GPT-5 Hackathon** (AIMLAPI & Lablab.ai) | *August 2025*
 - Placed in the top 5 among 3,000+ global participants; won special recognition and the social media category award for building Lexi, an AI contract analyzer.
- **Winner EcarsPay Hackathon** | *Dec 2024*
 - Led an engineering team to victory among several competitive teams to secure first place.
- **First Runner-Up NEAR Protocol Web Fusion Hackathon** | *Dec 2023*
 - Commanded the development team to build and launch a high-performance web solution under a strict submission window.
